**Objective:** Identify systemic barriers to meeting mental health and COVID 19 care and information needs for Black and Latinx LGBT+ youth living with HIV/AIDS.

**Background:**

80% of LGBT youth state the COVID Pandemic made their living situation more stressful.

**Proposed interventions:**

People with undertreated HIV/AIDS are at greater risk of worse COVID infections.

Pediatric clinics with on-site mental health, case management, peer coaches or consultation with psychiatry may provide a more integrated treatment.

Technology and school based interventions help reach youth where they are.
